

OpWatch911™ Response System Monitoring Tool Real Time Supervision

View and monitor your system status

OpWatch911 is an emergency response and system monitoring application that allows supervisors and oversight management personnel to view their system status in real time. OpWatch911 monitors your system from remote locations via a wireless mobile connection (i.e., portable laptop).

Real-time Reporting

Reduced liability

Increased accountability

Tracking and reporting

GPS map tracking of units

User-friendly interface

How it works

OpWatch911 establishes a secure VPN wireless connection to your existing CAD (Computer Aided Dispatch) database that provides a real-time view of active calls, personnel and unit location and movement (if GPS equipped), personnel status, time on scene, time at post, out of service information, late call tracking, and much more. OpWatch911 includes a live map of unit activity, active call queues, time threshold alerting, and a supervisor's report interface that allows field supervisors the ability to submit personnel, out of service, late call, or other supervisory reports in real time. With OpWatch911 ... you see the big picture.

Efficiency and prevention

OpWatch911 makes your operation more efficient by allowing you to capture and improve response and system problem areas as soon as they occur. Finding and correcting actual or potential problem areas will decrease response liability, save money, and streamline your whole operation. Rather than wait for several days or weeks to discover or report system issues, OpWatch911 allows your supervisors to monitor and track crucial system trends and issues as they unfold.

Give your field supervisors the edge

Supervisors with a live overview of day-to-day operations can quickly see and measure system trends and changes. With OpWatch911 your supervisors will employ enhanced information to do the job right.

Unit	Time	Alert
174	10:01:35	AS
176	10:01:35	AS
178	10:01:35	AS
180	10:01:35	AS
182	10:01:35	AS

Features and Benefits

OpWatch911™ Response System Monitoring Tool Real Time Supervision

- Real-time system monitoring
- Track units on street level map
- Track late calls
- Late call reporting
- Remote and wireless access
- Existing CAD integration
- Fully-functional mapping
- Built-in Internet paging
- Personnel/unit status alerts
- Track live incidents
- Snap to unit
- View one or all units
- Monitor:
 - GPS Unit information (speed, location, direction)
 - Personnel information/status
 - At scene time elapsed
 - At Hospital (EMS)
 - Out of Service status
